acceldata

SOLUTION BRIEF

# Acceldata Data Observability Platform

The Acceldata Data Observability Platform gives enterprise data teams a single, unified platform to build and manage data products. The platform helps solve common data pains:

- Improves data and analytics platform scaling and eliminates performance issues by identifying operational bottlenecks

- Eliminates cost and resource overruns by providing operational visibility, guardrails, and proactive alerts

- Identifies and delivers alerts about data quality issues and data outages by monitoring data reliability across your data supply chain

Unlike siloed solutions that address only single aspects of the data problem (e.g. data quality), the Acceldata Data Observability Platform synthesizes signals from multiple layers of the data stack and delivers comprehensive, actionable information so data teams can move fast. It is the only multi-layered solution that provides insights into compute, pipelines, reliability, users, and spend for the data stack.

The Data Observability platform helps data leaders and practitioners solve complex problems involved in building and operating data products. The platform gives data practitioners and site reliability engineers (SREs) quick insights they can apply to improve data quality, reliability, performance, and efficiency. Data leaders can align their business and data strategies, improve resource efficiency, and increase worker productivity to meet business requirements at a much lower cost.

Spend Intelligence

Proactively manage cost and usage to maximize business value.

Optimize your spend, eliminate cost overruns, and maximize your data ROI.

- ⭐ Optimize your cloud data platform spend
- ⭐ Gain confidence in your spend plan
- ⭐ Detect anomalies, use guardrails, and eliminate cost overruns

Data Reliability

Ensure delivery of high quality data on-time, everytime.

Use detailed insights to deliver high-quality data and remediate incidents swiftly.

- ⭐ Gain insights into your data assets and pipelines
- ⭐ Increase data quality and timeliness
- ⭐ Identify data incidents and rapidly fix them

Operational Intelligence

Gain real-time insights for optimal data operations.

Prevent outages, optimize your operations, and achieve excellence.

- ⭐ Prevent data platform outages
- ⭐ Optimize using best practices
- ⭐ Achieve operational excellence.

Integrations

Acceldata's Enterprise Data Observability Platform works across diverse technologies and supports public, private, hybrid and multi-cloud environments. Our platform helps maximize your return on investment in Snowflake, Databricks, Kafka, Hadoop, and other data ecosystems with deep insights into performance, data quality, cost, and operations.

About Acceldata

Acceldata pioneered the creation of Data Observability and is the market leader in data observability. Founded in 2018, Campbell, CA-based Acceldata, enables data teams to build and operate great data products, eliminate complexity, and deliver reliable data efficiently. Acceldata platform has been embraced by global customers, such as Oracle, PubMatic, PhonePe (Walmart), Verisk, Dun & Bradstreet, and many more.
